Winter Research Internship Offered in Denali

The Denali National Park Botany Team is looking for candidates skilled at winter backcountry travel and ecological research for a Geoscientists-in-the-Parks internship position running from December 2, 2019 through April 17, 2020.

This is a unique opportunity to spend the winter and spring seasons in Denali National Park while contributing greatly to a new project studying the relationship between snow depth and vegetation.

The intern will gain valuable experience conducting literature reviews, planning for and conducting fieldwork, as well as analyzing ecological data to answer relevant and timely questions about plant and snow distributions and change in subarctic Alaska.

Search the Geoscientists-in-the-Parks website for ID# 2019414 to view full details about the position and learn how to apply. The application process is open through June 17, 2019.

Combine your passion for winter recreation with your study of Ecology or Biology

Experience the Northern Lights and other magic of a subarctic winter

5-month internship runs December - April 2020

Benefits include housing, travel stipend, $400 per week, and possible education award

Apply by June 17th!
