See below PhD opportunity in Dr. Mike Quist's lab at U of Idaho....

********************************************************************

I'm looking for a PhD student to work on a Bull Trout project in Idaho. It's funded by the USFWS, but will include close interactions with other agencies, particularly IDFG. The project will include a good mix of modeling (distribution and abundance; pop persistence) using existing data and fieldwork focused on abiotic and biotic drivers of Bull Trout populations at multiple scales. The side boards are quite wide which will allow the student to make the research their own. Should be a fun, productive project. Below is a link to the AFS posting. Please pass along as you see fit.
