Postdoctoral Research Associate on Flow Ecology in Headwater Streams

We seek a Postdoctoral Research Associate as part of an interdisciplinary team investigating fish and benthic macroinvertebrate community responses to flow variation in headwater streams. Predictive spatial modeling of drought and flood effects is an important aspect of this research problem. Candidates should have experience in stream flow assessment, spatial modeling, and fish and benthic macroinvertebrate ecology with an emphasis on species traits.

This GS-12 term position is supported for 2 years as part of an interdisciplinary study in Shenandoah National Park (Virginia) with funding by the National Park Service and the US Geological Survey. The position is located at the USGS Leetown Science Center in Kearneysville, West Virginia, and the target start-date is April 2019. To apply, send a cover letter, CV, and contact information for references to Dr. Nathaniel (Than) Hitt <nhitt@usgs.gov>.
